

# Tribal Assistance Manager™

## Centralized Tribal Assistance Management

### *Streamline Your Tribal Services!*

Tribal Assistance Manager™ automates the process of maintaining tribal member assistance programs. It will support unlimited programs in one system. The system can track the eligibility and history of each tribal member, as well as allow different funding sources and produce custom vouchers that can be sent to the Finance Department. This software is a great application for programs like LIHEAP, EDH, Child Care, Elder Care, Gaming Distributions and Social Services.

#### Features:

- **Incoming Request**– Office Management and Clerks can log calls from participants and track their needs and priorities.
- **Program Definition Creation**– Create your own program definitions and set up the eligibility requirements for each program such as location, Income guidelines, CDIB, Tribal Affiliation, and Assistance caps and limits.
- **Assign participant request for assistance**– Apply requests to various programs to find the best option for providing assistance to the tribal member and see the history of request and funding for the member.
- **Laserfiche®**– Integrated document imaging for storing all applications, eligibility requirements and invoice information.

# Tribal Assistance Manager™

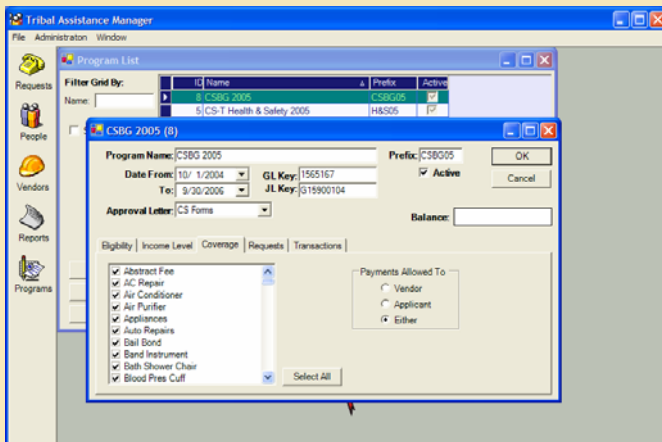

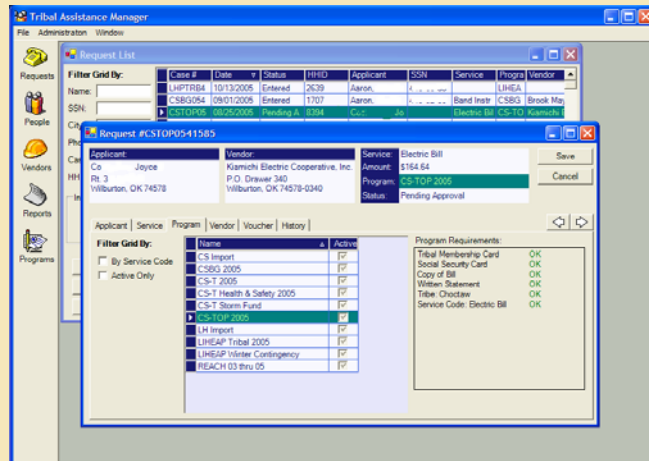

## Screen Previews

Tribal Assistance Manager Allows you to view Applicant and household members in the same view. You can view all assistance transactions for the household or the applicant for one program or all programs. Each applicant is assigned a unique number and is also assigned to a household ID number. All transaction history for an individual is transferred to a new household if the applicant changes households or starts a new family.

Each assistance transaction is handled in the Request module. You are able to step through a wizard that determines the best program, the type of service and the vendor who you wish to utilize for the assistance transaction. You can also determine if any documentation requirements are still outstanding during the creation of the assistance request. You can easily match services to individuals and track the status of the request during the entire process.

Program creation is the heart of TAM. You can create unlimited number of programs inside the program administrator module. You have the ability to custom define each program by Eligibility, Income Guidelines, and Service Type. By defining these areas you will be able to fit most of all programs that are affiliated with Tribal Government. At the end of the day you will be able to report on transaction totals across programs, services, demographics and households. TAM is Simple, Easy, Powerful and User friendly.
